

CASE STUDY

OCDMA system for optical networks

UNIVERSITAT
POLITÈCNICA
DE VALÈNCIA

- Application in optical access networks, Fiber-to-the Home, etc.
- Multiple users enabled by different optical codes
- Implemented with passive delay lines and parallel waveguide couplers
- Code tunability achieved adding phase shifts to each sample
- Optical chip manufacturing provided by:

Lionix

- ✓ TriPleX selected as the most suited material platform
- ✓ Thermo-optic heaters included for code tuning
- ✓ Chip layout successfully ported and validated in silicon photonics too:
